OPERATIONS RUNBOOK: SHIFT HANDOVER

Document ID: OPS-RB-014 | Effective: February 1, 2026 | Owner: Plant Operations

PURPOSE

Standardize shift-to-shift handover at all production lines to prevent loss of operational context, safety issues, and unplanned downtime.

HANDOVER PROCEDURE

1. Outgoing shift lead completes the Shift Log (form OPS-F-101) in the MES no later than 30 minutes before shift end.
2. The log must record: line status, open work orders, active alarms, material shortages, and any safety observations.
3. Incoming and outgoing shift leads conduct a 10-minute verbal handover at the line-side board.
4. Any equipment running in degraded mode must be physically tagged and listed in the log with a reference to the open maintenance ticket.

ESCALATION MATRIX

- [] Line stoppage > 15 minutes: notify Area Supervisor.
- [] Stoppage > 60 minutes or safety incident: notify Plant Manager and log incident in EHS Connect within 2 hours.
- [] Utility failure (power, compressed air, steam): call Facilities on-call immediately; do not attempt restart without Facilities sign-off.

AUDIT

Shift logs are audited weekly by the Operations Excellence team. Lines with 3 or more incomplete handovers in a month are flagged for retraining.

Shift Lead (outgoing): _____ Date: _____

Shift Lead (incoming): _____ Date: _____
